

Portfolio Content Map

CLAIM OPTIONS GENERATED 10 · SELECTED 1
PAGES MAPPED 6 · CALLS TO ACTION 1, REPEATED
STATUS IN PROGRESS – MAP COMPLETE, EVIDENCE PENDING

DELIVERABLE 01 · THE ONE LINE CLAIM

I design flows that take people from confused to done.

Booking, planning, scheduling. The screens people use when they are tired and just want the thing handled.

01 Claim Shortlist

Ten options generated, then read out loud, which is the fastest filter available. Nine did not survive the reading. Struck rows are rejected, the surviving row is marked.

GENERATED OPTIONS · 10

- 01 ~~I design apps that make complicated things feel simple, and I show my work.~~
- 02 ~~I turn messy user problems into flows people can actually finish.~~
- 03 ~~I design for people who are stressed, tired, or in a hurry.~~
- 04 ~~I care more about whether it works than whether it wins an award.~~
- 05 ~~I design booking and planning products that respect people's time.~~
- 06 ~~Every screen in here has a reason. I will tell you what it was.~~
- 07 ~~I sweat the boring screens, because that is where people get stuck.~~
- 08 I design flows that take someone from confused to done.
- 09 ~~I start with what users actually do, not what we wish they did.~~
- 10 ~~Product designer who shows the thinking, not just the pretty screens.~~

WHY 08

True across every case on the site. CareNest is a booking flow, Flyrank is a planning flow, Talla and Velora both move a person through a sequence toward a finished task. It makes a checkable promise rather than setting a mood.

WHAT I CHANGED

"Someone" became "people" so it reads warmer. A second line was added naming the product categories, so a recruiter knows within three seconds whether you fit their brief.

I design flows that take people from confused to done.

Booking, planning, scheduling. The screens people use when they are tired and just want the thing handled.

Kept for the About page: option 04. Most human line of the ten, but it claims quality instead of describing work, so it is too soft to be the first thing a recruiter reads.

VOICE CARD · LOCKED

Clear, thoughtful, conversational, honest, no fluff, professional

RULES

Simple language. No buzzwords, no exaggerated claims, no invented achievements or outcomes. Specific to real experience. Decisions explained clearly. It should read as a designer reflecting on her own work, not as generated text.

APPLIES TO

All three case studies, the Flyrank in progress page, the About page, and every call to action. One voice across the whole site, including the parts nobody reads closely.

RETIRED

The earlier card, passionate and funny and hopeful, is no longer in use. Copy already written against it gets rewritten rather than patched.

The chosen claim already passes this test. Six common words, one checkable promise, and no outcome claimed that has not happened.

02

The One Action

Every page ladders up to a single Week 1 goal: get an interview. The action that produces interviews at the lowest friction is a direct message.

PRIMARY CALL TO ACTION · USED ON ALL SIX PAGES

Contact me

Rendered as an email link in the sticky nav, at the end of every case study, and as the entire purpose of the Contact page. Same three syllables every time. A call to action that changes wording stops feeling like a promise and starts feeling like decoration.

REJECTED · BOOK A CALL

A calendar slot asks a recruiter to commit before they know anything about you. It survives as a small secondary line on the Contact page for people who prefer a slot.

REJECTED · VIEW MY RESUME

That is a step toward the goal, not the goal. The CV sits beside the contact details rather than competing with them.

03

Project Order

Two finished case studies lead. Two live projects follow, labelled in progress rather than dressed up as complete.

POSITION 01

Talla

Leads. Carries the first impression, so it needs the strongest hero visual on the site.

POSITION 02

CareNest

Screenshots already exist. The most complete case today.

IN PROGRESS

Velora

Screens partly done. Short focused page built around the nine into five flow, not a padded full case study.

IN PROGRESS

Flyrank

Research phase. Competitor analysis, live survey, and the verified persona pack.

04

Content Map

Every page, its sections in order, and its call to action. All six calls to action resolve to the same one action.

01 Hero

The claim, the two supporting lines, name, role, Cairo, open to remote. Buttons: See the work, Contact me.

02 Proof strip

Three facts, not adjectives. Two finished case studies. One live internship at an AI startup. Arabic RTL interface built to WCAG 2.1 AA. Avoid the word shipped unless something actually went live.

03 Selected work 01 TALLA · LEAD

Largest card, hero screenshot, one line on the problem and one on the outcome.

04 Selected work 02 CARENEST · READY

Same card format, slightly smaller. Shippable today.

05 In progress, two cards side by side VELORA FLYRANK

Smaller than the selected work cards, labelled honestly, each with a date for what comes next. Two live projects reads as momentum. Two padded case studies reads as filler.

06 How I work

Four steps in plain language. What you actually do, not a generic double diamond diagram.

07 About, short

Three sentences and a photo, linking out to the full page.

CTA Contact me

Full width band above the footer. Email, LinkedIn, CV download.

Talla

POSITION 01

00 ON THE CV: AI POWERED FASHION STYLING APP · MOBILE, IOS AND ANDROID

Context label required. One line at the top saying whether this was client work or self-initiated. Both are respectable. Leaving it ambiguous is what costs you.

01 Hero image and one line summary

First visual on the site after the claim. Doing more work than any other image here.

02 Role, timeline, tools

03 The problem

04 Who it is for

05 What I found out and how

06 Key decisions

Before and after screens. Where thinking becomes visible.

07 Flows and design system

Component library screenshot goes here. This is now one of the two places that evidences design systems and design tokens as core skills.

08 What I would test next

Three hypotheses and how you would test them.

CTA Contact me

Plus a quiet link: read CareNest next.

CareNest

POSITION 02

00 ON THE CV: APPOINTMENT BOOKING PLATFORM, EGYPTIAN MARKET · WEB AND MOBILE
Context label required. Client work or self-initiated, stated in one line.

01 Same eight sections as Talla

One spine across all three. Consistency is itself evidence that you work systematically.

02 Emphasis: Arabic RTL and WCAG 2.1 AA

The most distinctive thing on your CV, and almost nobody else in the pile has it. Give it real estate.

03 Component library screenshot

Paired with the annotated specs and tokens already mentioned on the CV. Together with Talla this covers the design systems claim.

04 Fix the footer branding

It currently reads LittleCircle. Rename to CareNest everywhere, including anywhere the site still says Appointment Booking Platform.

CTA Contact me

Plus a quiet link: see what I am working on now.

Velora		IN PROGRESS
00	ON THE CV: BICYCLE RENTAL PLATFORM, HYBRID OWNERSHIP MODEL · WEB	
	Context label required. Client work or self-initiated, stated in one line.	
01	Short page, one decision	
	Screens are partly done, so this is not a full eight section case study. Build it around the single strongest thing instead of padding it out to match the others.	
02	The problem, in three sentences	
03	Nine steps reduced to five screens	
	The whole point of the page. Show the task analysis, the old flow, and the new one side by side. This is the clearest before and after evidence you own.	
04	The heuristic evaluation	
	Twelve issues found, listed. Say plainly that this was a self audit, not moderated testing.	
05	Where it stands and what comes next	
	With a date. In progress plus a date reads as momentum. In progress with no date reads as abandoned.	
CTA	Contact me	
	Plus a quiet link: read Talla.	

About		HUMAN, SHORT
01	Who you are, in your own voice	
	Photo, one paragraph, no design manifesto.	
02	How I got into design	
	Business Administration into UX is a real story. Told plainly it reads as range, not as a gap.	
03	What I am good at	
	Research, information architecture, prototyping, design systems, RTL and accessibility.	
04	What I am still learning	
	Said plainly. Shortlist option 04 lives here.	
05	Tools and languages	
	Figma, FigJam, Maze. Arabic native, English professional.	
06	Download my CV	
CTA	Contact me	

Global		EVERY PAGE
01	Sticky nav	
	Work, About, Contact. Contact stays visible on scroll, including on mobile.	
02	Footer	
	Correct project name, LinkedIn, email.	
03	One action only	
	Nothing on any page gets equal visual weight to Contact me.	

Flyrank travel app		IN PROGRESS
01	What the project is	
	UX design internship at an AI startup, started June 2026.	
02	The problem with trip planning today	
03	What I am doing right now	
	Competitor analysis, a live survey, and a persona pack built from real submissions. Show the artifacts, not a summary of them.	
06	Early direction	
07	What comes next, with a rough date	
CTA	Contact me	
	Framed as: get in touch if you want to see where this lands.	

Contact		WHERE IT LANDS
01	One line invitation	
	Product or UX Designer roles. Remote, hybrid, or on site, open to relocation.	
02	Email, as text and as a link	
	Visible plain text matters. Some recruiters copy rather than click.	
03	LinkedIn	
04	Download my CV	
	PDF, named properly. Sarah_Hammad_Product_Designer.pdf, not a draft filename.	
05	Optional: book a 20 minute call	
	Secondary, smaller, for people who prefer a slot to an email.	
06	Response note	
	One honest line about how quickly you reply. Small, and it works.	
CTA	Contact me	
	The final call to action, and the reason every other page exists.	

Sorted by what stops the site going live, not by effort. Blocking items first.

BLOCKING

The site cannot go live until these are resolved.

☐ **Roll the names onto the CV**

Mapping settled: Talla is the AI powered fashion styling app, CareNest is the appointment booking platform, Velora is the bicycle rental platform. Write each CV heading as the product name followed by the descriptor, so a recruiter reading both documents knows it is the same work.

☐ **Remove the finance app from the CV**

Decided. It leaves with the five user interviews and the 40 plus component design system attached to it, which are the only two research proof points on the document. See the CV corrections below for what has to change elsewhere to cover that.

☐ **Talla screenshots plus a hero image**

At least six clean frames. Talla leads, so this is the first visual anyone sees.

☐ **Velora status, finished or not**

One answer decides whether it is Selected work 03 or an in progress card.

☐ **Velora screens**

However many exist. If the answer is none, it does not belong in selected work.

☐ **Fix the CareNest footer**

It currently reads LittleCircle.

☐ **A live URL**

A portfolio nobody can open is a document, not a portfolio.

VISUALS AND LINKS

The evidence that makes the claim believable.

☐ **Clickable Figma prototype, one per case study**

Set to public. Test each in an incognito window before linking it.

☐ **Before and after screens for two decisions**

The nine steps into five screens flow is the strongest artifact you have. Show it as a comparison.

☐ **Design system screenshot**

The 40 plus component library. One image proves more than the sentence does.

☐ **Live demo link, if any exists**

Mark not applicable if none of these shipped to production. Normal for design work, and better than an empty slot.

☐ **GitHub repository**

Relevant only for the portfolio site code itself. Link it if the site is hand built, since front end literacy is a real differentiator. Otherwise mark not applicable.

☐ **Flyrank artifacts**

The competitor analysis, the survey, and the persona pack, as images.

NUMBERS AND PROOF

Every number on the CV needs an artifact behind it before it appears on the site. An interviewer will ask you to walk through one.

☐ **6 plus apps analyzed** **TALLA**

The competitive benchmark file. This is the only research artifact behind your lead case, so it needs to be visible on the page.

☐ **Component library screenshots, Talla and CareNest** **GAP CLOSED**

Both have real libraries, so the design systems and design tokens claim survives the finance app removal. Two screenshots and it is evidenced.

☐ **User research evidence** **STILL THIN**

The five interviews left with the finance app and nothing replaced them. User Research sits on the core skills line with the six app benchmark behind it and nothing else. Either evidence it or soften the claim.

☐ **12 usability issues found** **VELORA**

The heuristic audit list.

☐ **Nine steps reduced to five screens** **VELORA**

The task analysis and the two screen sets. The single clearest before and after story you own.

☐ **Usability testing conflict** **RESOLVED**

Closing it by tightening the CV rather than running a test. The exact wording changes are listed below.

ONLY YOU CAN WRITE THIS

Four items with no shortcut. Nobody can draft these from the outside.

☐ **How I work, four steps**

Currently a section header with nothing under it. Write what you actually do on a project, in your own words. If it matches a textbook diagram, that is fine, but it has to be true.

☐ **Which projects were client work**

The four freelance projects were a mix of real clients and self-initiated concepts. Each case study needs its own label. A concept project honestly labelled is fine. A concept project presented as client work is the single fastest way to lose an offer.

☐ **Pseudonyms for the persona pack**

Real names and ages come out before publication.

☐ **Hosting decision**

GitHub Pages, Netlify, or Vercel, plus a domain. The site is hand built single file HTML, so all three take under an hour. This has been on the blocking list every week with no owner.

TESTIMONIALS AND UNFINISHED WORK

☐ **A short quote from your Flyrank supervisor or a teammate**

Two sentences will do.

☐ **A line from anyone you worked with at ZOOMO**

You supervised six people. One of them will vouch for you.

☐ **Flyrank work that is not finished**

Publish the research phase now with a date for what comes next. In progress with a date reads as momentum. In progress with no date reads as abandoned.

CV CORRECTIONS • EXACT WORDING

Five edits. Each one makes a claim smaller and truer, which is the only way the CV and the site can say the same thing.

☐ **Professional summary**

Replace "and usability testing" with "and heuristic evaluation". Everything else in that sentence you can evidence.

☐ **Core skills, UX process line**

Remove "Usability Testing". Add "Heuristic Evaluation" and "Survey Design", both of which you have actually done.

- ☐ **Flyrank bullet**
Replace the sprint usability testing line with what you are really doing: competitive research and survey design for a trip planning product, building a persona pack from real respondent data and checking every AI drafted trait against the raw transcripts. That is a stronger bullet than the one it replaces.
- ☐ **Velora bullet**
"Conducted a heuristic self-audit ahead of user testing" becomes "Conducted a heuristic evaluation of the flow". Drop the implication that testing followed.
- ☐ **LinkedIn line**
"full case studies and research documentation" becomes "case studies". Put the rest back when the documentation exists.

REMOVE, DO NOT GATHER

- ☐ **Any metric with no artifact behind it**
If a number was aspirational rather than measured, it cannot sit on an interview facing page. One invented figure found by a sharp interviewer costs you the credibility of everything else.
- ☐ **The research documentation promise on the LinkedIn line**
It currently advertises full case studies and research documentation. Put it back once the documentation exists.

06

Requirement Log

Every item on the assignment checklist, where it is answered, and its status. Rows marked pending need an input from you, not more writing.

Requirement	Status	Where it lives
Ten claim options generated	COMPLETE	Section 01, all ten listed with nine struck
Strongest option chosen and refined	COMPLETE	Section 01, option 08, with the edits shown
Short and memorable, one sentence	COMPLETE	Masthead claim block
Home page sections in order	COMPLETE	Section 04, nine rows
Strongest case study first	COMPLETE	Section 03, Talla at position 01
About page sections and CTA	COMPLETE	Section 04, About card
Case study sections, placement, CTA	COMPLETE	Section 04, four project cards on one spine
Contact page sections and final CTA	COMPLETE	Section 04, Contact card
Order of remaining projects	COMPLETE	Section 03, positions 01 to 04
Every page supports the Week 1 goal	COMPLETE	Section 02, one action across all six pages
Main call to action chosen	COMPLETE	Section 02, Contact me, with the rejected options logged
Still need to gather list	COMPLETE	Section 05, five tiers, all named categories covered
Which project is Talla, CareNest, Velora	RESOLVED	Fashion styling app, appointment booking platform, bicycle rental platform. Named on every card in section 04.
Where the finance app goes	RESOLVED	Coming off the CV. Section 05 logs what leaves with it.
Velora completeness	RESOLVED	Partly done. Moved to the in progress row as a short single decision page.

REQUIREMENT	STATUS	WHERE IT LIVES
Usability testing conflict	RESOLVED	Closed by tightening the CV. Five exact edits in section 05.
Design system evidence on the site	RESOLVED	Talla and CareNest both have component libraries. Two screenshots close it.
Flyrank publication rights	CLEARED	Publishable freely. Respondent anonymisation still required.
Client work or self-initiated	PENDING	A mix of both. Needs a per project label before any case study is written.
User research evidence	THIN	One benchmark file behind a claimed core skill.
How I work, four steps	EMPTY	Section exists in the map with no content.
Hosting	UNDECIDED	No platform, no domain, no date.
Case study voice card	LOCKED	Section 01. Clear, thoughtful, conversational, honest, no fluff, professional. Earlier card retired.

STATUS · FOUR ITEMS OPEN

Settled. Talla is the fashion styling app and leads. CareNest is the appointment booking platform. Velora is the bicycle rental platform, partly done, so it sits in the in progress row as a short focused page. The finance app comes off the CV. The usability testing conflict closes by tightening the CV wording rather than running a test.

Closed since the last pass. Talla and CareNest both have component libraries, so the design systems claim holds. Flyrank work is cleared for publication, subject to anonymising the respondents.

Still open. Which projects were client work and which were self-initiated. The four steps under How I work. User research evidence, which is now one benchmark file behind a claimed core skill. And a hosting decision, which has survived every version of this document so far.

Voice, settled. Clear, thoughtful, conversational, honest, no fluff, professional. Recorded in section 01 and applied to every page from here on.

Portfolio content map · Week 3 deliverable · Sarah Hammad, Product and UX Design, Cairo · map complete, decisions logged, evidence pending
